

Dynamic Route

```
import Link from "next/link";
import axios from "axios";

//nextJs에서 [id].js 제공
<Link href="/view/join/[id]_join" as={` /view/join/${item.id}`}>

위에서 어떤값이 왔느냐에 따라서 분기처리들이 가능

import Axios from 'axios'
import Head from 'next/head';
import { useRouter } from 'next/router'
import NftLoanPage from '../components/NftLoanPage';

const Post = () => {
  const router = useRouter();
  const id = router.query.id -> 여기 값을 얻어올수 있음 query는 보니까 json 형태

  if(id == '001'){
    return <NftLoanPage />
  }else if(id == '002'){
    return (
      <div>만드는중</div>
    )
  }else if(id == '003'){
    return (
      <div>만드는중</div>
    )
  }else if(id == '004'){
    return (
      <div>만드는중</div>
    )
  }
}

export default Post;
```
